## **DETAILED ACTION**

## Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 3, drawn to inhibitory RNA having the sequence of SEQ ID NO: 1.

Group II, claim(s) 3, drawn to inhibitory RNA having the sequence of SEQ ID NO: 2.

Group III, claim(s) 3, drawn to inhibitory RNA having the sequence of SEQ ID NO: 3.

2. It is noted that claims 1-2, and 4-9 are considered to link the above invention groups I-III.

The restriction requirement among the linked inventions is subject to the nonallowance of the linking claims, claims 1-2 and 4-9 Upon the allowance of the linking claims, the restriction requirement of the linked inventions shall be withdrawn and any claims depending from or otherwise including all the limitations of the allowable linking claims will be entitled to examination in the instant application. Applicants) are advised that if any such claims depending from or including all the limitations of the allowable linking claims is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. In re Ziegler, 44 F.2d 121 1, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

3. This international searching authority has found 3 inventions claimed in the International Application covered by the claim(s) indicated below:

Claim 3 specifically recites inhibitory RNA (iRNA) having the sequence of SEQ ID NO: 1-3, which are characterized as being capable of selectively inhibiting the expression of an ANT isoform.

Application/Control Number:

10/542,708

Art Unit: 1633

4. This international searching authority considers that the international application

Page 3

does not comply with the requirements of unity of invention (Rules 13.1, 13.2, and 13.3)

for the reasons indicated below:

According to the guidelines in Section (f)(i)(a) of Annex B of the PCT Administrative Instructions, the special techincal feature as defined by PCT Rule 13.2 shall be considered to be met when all the alternatives of a Markush-group are of similar nature. For chemical alternatives, such as the claimed antisense sequences, the Marksuh group shall be regarded as being of similar nature when:(A) all alternatives have a common property or activity and (B)(1) a common structure is present, i.e, a significant structure is shared by all of the alternatives or (B)(2) in cases where the common structure cannot be the unifying criteria, all alternatives belong to an art recognized class of compounds in the art to which the invention pertains.

- 5. The iRNA sequences of SEQ ID NO: 1-3 are considered separate inventions for the following reasons: the sequences do not meet the criteria of (A), i.e. sharing a common property or activity or (B)(2), art recognized class of compounds. Although the iRNA sequences target and inhibit the expression an ANT isoform, each iRNA sequence behaves in a different way in the context of the claimed invention. Each sequence comprise a distinct nucleotide structure, and targets a different and specific nucleotide region of a sequence encoding an ANT isoform, each iRNA sequence inhibits the expression of the ANT isoform to varying degrees. Each member of the class cannot be substituted, one for the other, with the expectation that the exact intended result would be achieved.
- 6. Further, although the iRNA sequences target an isoform of ANT, the sequences do not meet the criteria of (B)(1), as they do not share, one with another, a common core structure. Accordingly, unity of invention between the iRNA sequences is lacking

Application/Control Number:

10/542,708

Art Unit: 1633

and each iRNA sequence claimed is considered to constitute a special technical feature.

7. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

10/542,708 Art Unit: 1633

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janet L. Epps-Ford whose telephone number is 571-272-0757. The examiner can normally be reached on M-F, 10:00 AM through 6:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Woitach can be reached on 571-272-0739. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
